

Construction Project Management System

Problem Statement

Many construction companies still use manual methods to manage projects, workers, materials, and payments

This can lead to lost information, delays, and difficulty in tracking project progress.

The Construction Project Management System is designed to organize all project data in one database, making project management easier, more accurate, and more efficient.

Project Objectives

1. To manage construction projects efficiently.
2. To store information about clients, engineers, workers, and materials.
3. To track project progress and payments.
4. To improve data accuracy and reduce manual work.
5. To generate reports for better decision-making

Target Users

1. Project Manager
2. Site Engineer
3. Accountant
4. System Administrator

Expected Benefits

1. Better project organization.
2. Faster access to information.
3. Reduced data errors.
4. Improved project monitoring.
5. Secure data storage.
